

When the panel does not resolve a winner

Across 3,059 variant-image comparisons on the 437-image common subset, only 2 have no majority; none has a majority tie.

Shared semantic miss

All three judge outcomes appear when neither answer names the visible subject.

Teacher VLM

"The image appears to be an aerial or satellite view of a landscape, possibly a river or a large body of water with surrounding land. The terrain is ..."

Student, explanation-guided

"The image depicts a close-up view of a rocky shoreline with clear, shallow water. The rocks are jagged and uneven, with some areas showing signs of ..."

Panel split

Qwen3.5: student

GLM-4.6V: tie

MiniCPM-V: teacher

Reading The image contains a marine mammal in water, but the teacher describes a landscape and the student a shoreline. The split reflects unresolved errors, not a reliable student gain.

Near-equivalent descriptions

A visually faithful pair can split judges on minor wording differences.

Teacher VLM

"The image depicts a bustling casino interior with numerous slot machines and gaming tables. The ceiling features ornate lighting fixtures, adding to ..."

Student, explanation-guided

"The image depicts a lively casino or gambling establishment with numerous slot machines and gaming tables. The ceiling features an intricate design ..."

Panel split

Qwen3.5: tie

GLM-4.6V: teacher

MiniCPM-V: student

Reading Both answers describe the casino scene accurately. Opposite preferences depend on small specificity claims, so a tie would be the most conservative interpretation.
